LeetCode:// **400+ Problems**

COURSEWORK

Data Structures & Algorithms
Object-Oriented Programming
Database Management Systems
Operating Systems
Computer Networks
System Design

SKILLS

LANGUAGES

C++ • TypeScript • JavaScript • Python • SQL

BACKEND

Node.js • Express.js • REST APIs

FRONTEND

React • Next.js • Tailwind CSS

DATA

PostgreSQL • Redis • MongoDB

CLOUD

AWS • Docker • Git • GitHub Actions

AI

LLM APIs • Embeddings • RAG • Vector Search

CORE

DSA • OOP • DBMS • OS • CN • System Design

EXPERIENCE

THE TRIAL STORE | Co-FOUNDER, PRODUCT & TECHNOLOGY

New Delhi, India | Jul 2022 -- Present

- Led product and technology across the evolution from a **B2B apparel marketplace** to **D2C Try-Before-Buy commerce** and an in-house Gen-Z apparel brand.
- THE TRIAL STORE**: Scaled the D2C platform to **85K+ users** and **₹15-20L+ monthly sales during high-performing periods**, with approximately **₹1,400 AOV** and a **15% commission model**.
- Designed a **Try-Before-Buy** workflow supporting up to four products per trial, assisted sizing and final billing only after customers selected the products they wanted to purchase.
- Designed product and fulfillment workflows supporting **30-60 minute hyperlocal delivery** across Delhi through distributed inventory and trial-inventory management.
- LIFTKARO**: Co-founded a B2B apparel marketplace and onboarded **100+ manufacturing partners/sellers**, defining seller onboarding, catalog, transaction and verification workflows.
- GRVY**: Transitioned into a vertically integrated Gen-Z apparel brand, building capabilities across fabric sourcing, product development, manufacturing, printing, quality control and inventory; scaled operations across **25+ workers and two rented 300 sq. yd. facilities**.
- Owned early-stage technology direction across product requirements, UX workflows, Shopify/custom integrations and coordination with external engineering resources.

PROJECTS

EVENT-DRIVEN ORDER & INVENTORY SYSTEM | TYPESCRIPT, NODE.JS, POSTGRES SQL, REDIS, KAFKA, DOCKER

- Building an event-driven backend with transactional inventory reservation, idempotent order processing and asynchronous fulfillment using PostgreSQL, Redis and Kafka.
- Implementing concurrency-safe inventory updates, retries, rate limiting, automated testing and containerized AWS deployment.

AI KNOWLEDGE & SEMANTIC SEARCH PLATFORM | PYTHON, FASTAPI, REACT, EMBEDDINGS, VECTOR DB, LLMs

- Building a semantic search and RAG platform combining vector retrieval, metadata filtering and LLM-based query understanding.
- Implementing ingestion, embedding generation, hybrid retrieval, evaluation workflows and structured LLM responses through FastAPI.

ACHIEVEMENTS

- Approximately **\$100K AWS credits** for startup infrastructure and product development.
- Selected for **NVIDIA Inception** with access to AI/developer resources and technical support.
- Participated in **Startup India/state incubation, NASSCOM** and **Microsoft Founders Hub** startup ecosystems.
- Solved **400+ LeetCode problems** across core DSA patterns.
